## TECHNI Waterjet™ Celebrates 20 Years of Innovation

TECHNI Waterjet™, a worldwide leader and expert in waterjet cutting applications, this year proudly celebrates a 20 year anniversary of commitment to waterjet technology, innovation, industry leadership, and development. Since 1989, TECHNI has been a leading supplier of high pressure waterjet and abrasive waterjet cutting solutions all around the world.

“It has been an exciting journey over the past 20 years, being a part of a rapidly growing and developing industry. I look forward to the future with great optimism, knowing that TECHNI Waterjet will lead the World in the development of new Water Jet Cutting Technology. I would like to thank all the staff who have shared my passion for innovation and who have made TECHNI Waterjet the incredible success story that it is.” Says Darren Reukers, Founder and Joint Managing Director.

The company was formed in 1989 by Darren Reukers and Glenn Langdon to provide robotic and automation systems to the Automotive Industry. After finding a niche in the robotic waterjet market for high speed trimming of automotive components such as, headliners, floor and trunk carpets, door panels and instrument panels, **TECHNI Waterjet™** took off and has since become a global leader in the waterjet industry.

“It has been a very satisfying experience watching TECHNI Waterjet grow and develop into the global industry leader it is today. But this could not have been achieved without the hard work and dedication of our staff, many of which have been with us from the start. The long term dedication and support of our distributor base has also been a key factor in our success in making TECHNI Waterjet what it is today. I am eternally thankful to our staff and distributors but more importantly they also uphold the company values and the technology commitment to be a world leader and they support and practice the values of customer service that are entrusted to them every day.” Say Glenn Langdon, Co-Founder and Sales Director

Each year TECHNI has progressed while introducing newer and better products and in more countries, across the world, than ever before. In 2004, **TECHNI Waterjet™** opened a USA operation to meet the expanding needs of our North American customer base. By 2009, the TECHNI Waterjet USA operation has grown to equal the worldwide operations, including just recently re-locating to a 38,000 sq. ft. facility to support the increasing demand and continuous success in North America.

“TECHNI Waterjet is uniquely positioned in the world market with major operations in three different continents. Our new manufacturing, sales and service facility near Kansas City is first-class and will support our continued growth in the North American market despite the down economy,” says Michael Burns, President TECHNI Waterjet USA.

TECHNI presents our customers the best products and services available in the waterjet cutting industry. Including the latest innovation from **TECHNI Waterjet™**, the **PAC 55™** “Precision Angle Control” five-axis cutting head with a true angle up to +/-55 deg capability with continuous rotation.

**TECHNI Waterjet™** offers a wide range of waterjet machines to choose from, including the “**Techjet-X2® "Premium Series"**”, the “**Intec® Value Series**” and the “**ILS Light Series**” offered in a variety of sizes from 3’x3’ to 10’x20’. We also offer customized machines in a vast array of sizes suitable to the needs and requirements of the customer.
