

“Loading and unloading of material onto a machine tool can quite often determine how profitable the machine tool is. Techni Waterjet has developed a range of unique solutions to minimise the labour required, increase the production and minimise the chance of material breakage or damage”.

## 500 Kg Jib Arm

Has a 3 stage vacuum end effector with retractable arms for smaller parts removal. Compact and easy to operate.

## 150Kg Jib Arm

With extending arms and 90° rotation. Ideal for thin glass and tile applications.

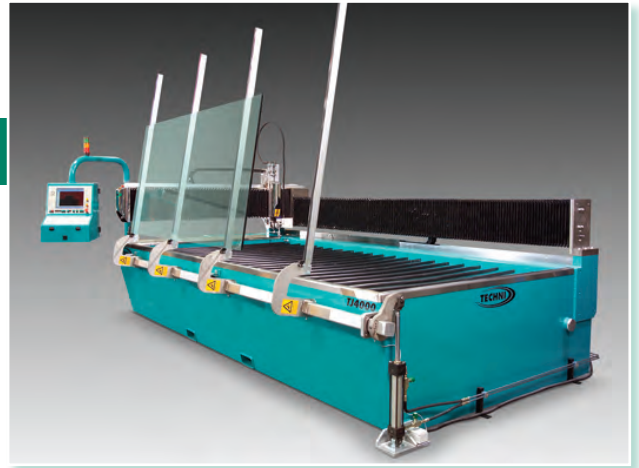

## EZY-LOAD 120LT

Pneumatically operated 90° tilting arms allow for vertical loading of fragile materials such as glass and stone. The adjustable arms will support the material at the critical areas for loading and unloading, up to a maximum weight of 120kg (250lb).

## EZY-LOAD 300MD

A heavy duty version that uses hydraulics to raise and lower the material from horizontal to vertical, up to a maximum 300kg (660lb).

## EZY-LOAD 500HDX

The 500HDX will not only rotate the material from horizontal to vertical, but will also lower it to the ground. This will greatly improve safety and ease of handling. Maximum load capacity 500kg (1100lb).
