

Break Away Head

A Crash Sensing Break Away Head reduces the risk of damaging your valuable investment and will stop unnecessary replacement of focusing tubes, saving you time and money. When the cutting head inadvertently crashes into a clamp or fixture, or hits the edge of a work piece or an upturned part, the Break Away Head will detect the crash and automatically stop the machine. The precision tolerance and design of the Crash Sensing Break Away Head ensures that crash recovery and return to the exact previous position is easy. The system does not rely on servo motor stall to shut down machine like competitive systems.

Benefits include:

- Reduces damaged focusing tubes and bent nozzle tubes
- Reduces waste and scrap parts due to lost position
- Protects machine from major damage
- Restarts in the exact same place
